

Bowie 12"

USES

- | The bowie is mainly used to break through the vegetation, and it is ideal for cutting work, for clearing forests and passing and working areas allowing the advancement of personnel, and for assisting the work of the chainsaw operator. Designed and developed for use with Trekking Backpacks.

DESIGN AND MATERIALS

- | It is made of heat-treated, polished and sharpened rolled steel.
- | It is designed to withstand loads that could bend it and impact on hard surfaces.
- | Its low weight optimizes its handling without neglecting the technical performance required for the activity.

SHEATH

- | The bowie has an ambidextrous textile sheath reinforced in the areas of contact with the edges that can be secured to the waist and leg of the user, which provides safety during transport and use avoiding accidents and allowing to draw it easily from the sheath.

OPTIONAL

- | The bowie is offered with an optional sharpening file inside the sheath.

Weight	0.34 kg	Type of sheath	Ambidextrous
