

Witch swatter

USES

- | It is a suffocation tool that acts in a similar way as the fire swatter extinguishing and suffocating the flame and eliminating oxygen by hitting the fire line.
- | It is recommended to use it in terrains with landforms and irregularities, stony soils, or closed vegetation where it is uncomfortable to work with a fire swatter.

MATERIALS

- | It is produced with strips of vulcanized rubber reinforced with two textile meshes to provide resistance to tearing. These strips copy the shape of the ground allowing to extinguish fire copying the irregular topography.
- | The fiberglass handle is short so that the tool is easy to handle in closed vegetation or in hard-to-reach areas.

WILDFIRE

DRAGON SWATTER

Weight	2.2 Kg	Number of strips	11
Total length	1.3 m	Length of strips	530 mm
