

The Ionic Throwlines are manufactured from hard-wearing 600 denier Ripstop fabric to ensure a rugged and durable construction. The main body of the throw-bag is a one piece design for extra strength as many throw-bags have a separate collar stitched on the main body of the bag which can separate.

The Throwlines are fully fitted with a high buoyancy foam insert for added buoyancy which is especially useful when in use in a substantial flow.

The throw-bag is supplied with 10mm floating rope with a breaking strength of 10KN.

SAF62001

IONIC 10mm Polypropylene Throwlines

- 600D Ripstop fabric construction (bag)
- 10mm high visibility polypropylene floating rope
- Reinforced collar
- Webbing attachment loop fitted to the collar
